Diogo Gonçalves

cv@diogog.com
in/diogo-a-goncalves

Platform and Cloud Engineer with 5+ years operating production infrastructure at scale across GCP and AWS, including regulated financial environments. Specialized in IaC, CI/CD automation, and Kubernetes, with a strong focus on enabling product teams through self-service tooling, robust observability, and a track record in on-call and incident response.

Employment

Euronext **Porto, Portugal** **January 2026 – Current**

DevOps Engineer

- Led the migration of an acquired company into Euronext's AWS cloud, coordinating directly with the CTO; modernized the stack with Fargate, autoscaling, and end-to-end CI/CD pipelines shipping to ECR with per-environment downstream triggers.
- Migrated most of the team's infrastructure code from CloudFormation to Terraform; set up dedicated alert channels delivering to Microsoft Teams and Logic Monitor for 24/7 NOC coverage.
- Built AI agents that automatically triage incidents on arrival, giving the team an initial diagnosis before anyone looks into it, and automate deployment planning through Jira-driven train scheduling.
- Investigated and resolved production incidents across Kubernetes, ECS/EC2, and databases, including diagnosing a performance regression traced to corrupted query planner statistics after a major Postgres upgrade.
- Maintained Jenkins and GitLab CI pipelines orchestrating Ansible, Terraform, and CloudFormation automation; monitored production systems using Coralogix.

Channable **Utrecht, Netherlands** **February 2023 – December 2025**

DevOps Engineer

- Designed and maintained GCP-based infrastructure, including bare-metal instances, Nomad clusters, PostgreSQL databases, and cloud storage.
- Built reproducible infrastructure using Nix for system configurations, and automated provisioning with Terraform, Ansible.
- Built custom Prometheus exporters and Grafana dashboards to provide production observability and proactive alerting across the platform.
- Supported more than 20 engineering teams (~100 engineers) in debugging, deployment, and infrastructure issues.
- Participated in on-call rotations as part of a team maintaining 24/7 system reliability, 99.999% uptime, and strict SLA requirements.
- Developed an internal continuous deployment automation service to streamline application releases, using GitHub Actions and SemaphoreCI pipelines.
- Implemented Terraform-based disaster recovery automation capable of provisioning the full infrastructure from scratch, covering backup, restore, and failover.

Bsolus **Braga, Portugal** **September 2020 – November 2021**

Software Engineer

- Led development of a microservice-based marketing automation platform using Python, NestJS, MongoDB, Docker, and GCP, as the primary engineer; the platform was piloted by a client company before I left.
- Set up the CI/CD pipeline from Bitbucket to GCP (Docker image builds and deployment) and created a Jest abstraction layer that reduced the effort of writing integration tests.

Education

University of Minho **Braga, Portugal** **October 2016 – April 2022**

MSc Software Engineering, Computer Graphics & Parallel Computing (2019–2022), BSc Software Engineering (2016–2019)

Technical Projects

Home Lab **2023 – Present**

Managed a homelab using Talos Linux, Kubernetes, and FluxCD (GitOps) across heterogeneous hardware (amd64, Raspberry Pi 4/5), running self-hosted services including Gitea, Grafana, Jellyfin, Immich, and Uptime Kuma.

Skills

Languages: Python, Go, Bash, C++, Haskell, Nix
Infrastructure: GCP, AWS, Terraform, Ansible, CloudFormation, Docker, Kubernetes, Nomad, ECS, Vault, PostgreSQL
Observability: Prometheus, Grafana, Alertmanager, Mimir, Coralogix, Alloy
CI/CD & Developer Platforms: GitHub Actions, GitLab CI, Jenkins, SemaphoreCI
Spoken: English (fluent), Portuguese (native)
