Diogo Gonçalves

cv@diogog.com
in/diogo-alexandre-gonçalves

Platform and Cloud Engineer with 5+ years operating production infrastructure at scale across GCP and AWS, including regulated financial environments. Specialised in Kubernetes, IaC, and CI/CD automation, with a strong focus on enabling product teams through self-service tooling, robust observability, and reliable on-call practices.

Employment

Euronext **Porto, Portugal** **January 2026 – Current**

DevOps Engineer

- Migrating an external project into Euronext's AWS cloud within a highly regulated financial trading environment, aligning infrastructure, security controls, and deployment workflows with strict compliance standards.
- Diagnosed and resolved a production database performance incident caused by corrupted query planner statistics; proposed and drove the remediation that restored normal query performance.
- Built AI-powered automation agents for CloudFormation and Terraform, enabling the engineering team to self-serve infrastructure provisioning and reducing manual requests to the platform team.
- Supported development teams with application deployments and first-line triage of production issues across Kubernetes and ECS/EC2 clusters, investigating and resolving or escalating with full context.
- Maintained Jenkins and GitLab CI pipelines orchestrating Ansible, Terraform, and CloudFormation automation; monitored production systems using Coralogix.

Channable **Utrecht, Netherlands** **February 2023 – December 2025**

DevOps Engineer

- Designed and maintained GCP-based infrastructure, including bare-metal instances, Nomad clusters, PostgreSQL databases, and cloud storage.
- Built reproducible infrastructure using Nix for system configurations, and automated provisioning with Terraform, Ansible.
- Created and deployed custom Prometheus exporters and Grafana dashboards to ensure production observability and proactive alerting.
- Supported more than 20 engineering teams (~100 engineers) in debugging, deployment, and infrastructure issues.
- Participated in on-call rotations to ensure 24/7 system reliability, contributing to achieving 99.999% uptime and meeting strict SLA requirements.
- Experienced with GitHub Actions and SemaphoreCI; developed an internal continuous deployment automation service to streamline application releases

Bsolus **Braga, Portugal** **October 2020 – November 2021**

Software Engineer

- Built a microservice-based marketing automation platform using Python, NestJS, Docker, and GCP.

Education

University of Minho **Braga, Portugal** **October 2016 – April 2022**

- Master's in Software Engineering (specialized in Computer Graphics and Parallel & Distributed Computing)
- Bachelor's in Software Engineering

Technical Projects

Home Lab

- Managed a homelab using Talos Linux, Kubernetes, and FluxCD (GitOps) across heterogeneous hardware (amd64, Raspberry Pi 4/5), running self-hosted services including Gitea, Grafana, Jellyfin, Immich, and Uptime Kuma.

Skills

- **Languages**: Python, Go, Bash, C++, Haskell, Nix
- **Infrastructure**: GCP, AWS, Terraform, Ansible, CloudFormation, Docker, Kubernetes, ECS, Vault, PostgreSQL
- **Observability**: Prometheus, Grafana, Alertmanager, Mimir, Coralogix, Alloy
- **CI/CD & Developer Platforms**: GitHub Actions, GitLab CI, Jenkins, SemaphoreCI
