Diogo Gonçalves

DevOps and Platform Engineer with 5 years in software and infrastructure engineering, operating production systems at scale on GCP and AWS, including regulated financial environments. Day to day: IaC, CI/CD automation, Kubernetes, observability, IAM and patching, plus on-call and incident response.

Employment

Euronext **Porto, Portugal** **January 2026 – Current**

DevOps Engineer

- Led the migration of an acquired company into Euronext's AWS cloud, working with the CTO: Fargate, autoscaling, and CI/CD pipelines shipping to ECR with per-environment triggers.
- Migrated most of the team's infrastructure code from CloudFormation to Terraform.
- Set up alert channels to Microsoft Teams and LogicMonitor for 24/7 NOC coverage, and built AI agents that triage new incidents and post a first diagnosis for the team.
- Resolved production incidents across Kubernetes, ECS/EC2, and databases, including a performance regression traced to corrupted query planner statistics after a major Postgres upgrade.
- Maintained Jenkins and GitLab CI pipelines for Ansible, Terraform, and CloudFormation; monitored with Coralogix.
- Built an AI agent that plans releases from Jira tickets.
- Manage AWS IAM (roles, policies, least-privilege access) and apply system and platform updates as released.

Channable **Utrecht, Netherlands** **February 2023 – December 2025**

DevOps Engineer

- Designed and maintained GCP-based infrastructure, including bare-metal instances, Nomad clusters, PostgreSQL databases, and cloud storage.
- Built reproducible infrastructure with Nix and automated provisioning with Terraform and Ansible.
- Built custom Prometheus exporters and Grafana dashboards for production observability and alerting.
- Supported 20+ engineering teams (~100 engineers) in debugging, deployment, and infrastructure issues.
- On-call rotation in a team maintaining 24/7 reliability, 99.999% uptime, and strict SLAs.
- Developed an internal continuous deployment service on GitHub Actions and SemaphoreCI to streamline releases.
- Implemented Terraform-based disaster recovery that provisions the full infrastructure from scratch, covering backup, restore, and failover.
- Managed IAM across GCP and applied system and platform updates as they became available.

Bsolus **Braga, Portugal** **September 2020 – November 2021**

Software Engineer

- Led development of a microservice-based marketing automation platform (Python, NestJS, MongoDB, Docker, GCP) as primary engineer, owning infrastructure, deployments, and Bitbucket-to-GCP CI/CD; a client piloted it before I left.
- Created a Jest abstraction layer that reduced the effort of writing integration tests.

Education

University of Minho **Braga, Portugal** **October 2016 – April 2022**

MSc Software Engineering, Computer Graphics & Parallel Computing (2019–2022), BSc Software Engineering (2016–2019)

Technical Projects

Home Lab **2023 – Present**

Managed a homelab using Talos Linux, Kubernetes, and FluxCD (GitOps) across heterogeneous hardware (amd64, Raspberry Pi 4/5), running self-hosted services including Gitea, Grafana, Jellyfin, Immich, and Uptime Kuma.

Skills

Languages: Python, Go, Bash, C++, Haskell, Nix
Infrastructure: GCP, AWS, Terraform, Ansible, CloudFormation, Docker, Kubernetes, Nomad, ECS, PostgreSQL
Security: IAM (AWS, GCP), Vault, patch management
Observability: Prometheus, Grafana, Alertmanager, Mimir, Coralogix, Alloy
CI/CD & Developer Platforms: GitHub Actions, GitLab CI, Jenkins, SemaphoreCI
Spoken: English (fluent), Portuguese (native)
