Diogo Gonçalves

cv@diogog.com
in/diogo-alexandre-gonçalves

Platform and DevOps engineer with 5 years in software and infrastructure engineering on GCP and AWS, including a regulated financial trading environment. Works with Kubernetes, infrastructure as code and CI/CD, focused on self-service tooling, observability and a sustainable on-call.

Employment

Euronext **Porto, Portugal** **January 2026 – Current**

DevOps Engineer

- Lead the integration of an external platform of around 15 services into Euronext's AWS environment, aligning infrastructure, security controls and deployments with the compliance rules of a regulated trading venue.
- Migrated most of the team's infrastructure code from CloudFormation to Terraform, including alerting, and set up dedicated alert channels that deliver to Microsoft Teams.
- Developed and support 3 projects, each in its own AWS account.
- Built AI agents that prepare production releases: they gather the tickets approved by change management from Jira, assemble what will be deployed and flag manual steps that must run first.
- Help with PostgreSQL incidents and upgrades, including a slowdown caused by corrupted planner statistics.
- Link between dev teams and production: run deployments, including weekends, and join the on-call rotation.

Channable **Utrecht, Netherlands** **February 2023 – December 2025**

DevOps Engineer

- Built an internal continuous deployment automation service to streamline application releases.
- Supported 20+ engineering teams (~100 engineers) with debugging, deployments and infrastructure problems.
- Took part in the 24/7 on-call rotation, contributing to 99.999% uptime against strict SLAs.
- Designed and maintained GCP infrastructure: bare-metal instances, Nomad clusters, PostgreSQL and cloud storage.
- Made systems reproducible with Nix, and automated provisioning with Terraform and Ansible.
- Wrote custom Prometheus exporters and Grafana dashboards for production observability and proactive alerting.
- Wrote the disaster recovery plan covering backup, restore and failover.

Bsolus **Braga, Portugal** **October 2020 – November 2021**

Software Engineer

- Designed the full architecture of a microservice-based marketing automation platform as my MSc dissertation, built with NestJS, Python, MongoDB, Docker and GCP, and piloted by a client company before I left.
- Set up the CI/CD pipeline from Bitbucket to GCP (Docker image builds and deployment) and created a Jest abstraction layer that reduced the effort of writing integration tests.

Education

University of Minho **Braga, Portugal** **October 2016 – April 2022**

- Master's in Software Engineering (specialized in Computer Graphics and Parallel & Distributed Computing)
- Bachelor's in Software Engineering

Technical Projects

Home Lab

- Run a GitOps homelab on Talos Linux and Kubernetes with FluxCD across amd64 and Raspberry Pi 4/5 nodes, hosting Gitea, Grafana, Jellyfin, Immich and Uptime Kuma.

Skills

- **Languages**: Python, Go, Bash, C++, Haskell, Nix
- **Infrastructure**: GCP, AWS, Terraform, Ansible, CloudFormation, Docker, Kubernetes, Nomad, Vault, PostgreSQL
- **Observability**: Prometheus, Grafana, Alertmanager, Mimir, Coralogix, Alloy
- **CI/CD & Developer Platforms**: GitHub Actions, GitLab CI, Jenkins, SemaphoreCI
- **Spoken**: English (C2), Portuguese (native)
